01/ SUMMARY

Senior full-stack engineer with a frontend focus and 6+ years across fintech, SaaS, e-commerce, and healthcare: **React, Next.js, TypeScript, and Vue/Nuxt** on the front, **Node.js, NestJS, C#/.NET, Prisma, and PostgreSQL** behind it, plus AI features such as meeting transcription. **Leads a team of 7+ engineers** and owns architecture, from data-heavy dashboards to realtime systems.

02/ EXPERIENCE

Senior Full-Stack Engineer / Frontend Lead

MAR 2024 – PRESENT CURRENT

BitBang · Remote

SparkFlow

INITIATED · FULL-STACK

React 19 · TypeScript · TanStack Query · NestJS · Fastify · Prisma · PostgreSQL · Redis · Socket.IO · BullMQ

- BitBang's internal task and project-management tool: I initiated it from team bench time, gathered the features, wrote the requirements, and designed the database (ERDs), security, and UI/UX. It **replaced BitBang's Jira subscription** and runs every team project with minimal issues.
- Built with AI-assisted development (Claude Code, Codex, Claude Design): workspaces, boards, backlog, sprints, and issues; a rich-text editor with mentions; realtime updates over Socket.IO and Redis; BullMQ workers for notifications; and an MCP server that lets AI agents take tickets and update their status.
- Production hardening: Microsoft Entra SSO plus email/password auth, tenant and project isolation in queries and database constraints, indexed paginated reads, and virtualized boards.

- Delivered full-stack features on **Yally**, an AI workplace platform: React web app plus C#/.NET (ABP, EF Core) backend work — legacy .doc to .docx conversion, after-commit realtime chat events, billing and permission rules — and Arabic/English transcription for its Microsoft Teams meeting bot (OpenAI, AWS Transcribe).
- Led frontend architecture across BitBang's products, worked with backend teams on API contracts, and mentored a team of 7+ engineers, with an onboarding redesign that cut ramp-up to 2 weeks.
- Owned the **GoPay** frontend, a SADAD-integrated B2B billing platform: refactored its legacy, hard-to-scale codebase into a feature-based architecture, set the standards the team builds on, and revamped the Biller dashboard.
- Led the **Amplifidor** frontend and two engineers — architecture, task split, and pixel-perfect reviews — and built its profiles, audience insights, wallet, and Arabic RTL; the team out-delivered the mobile and backend teams.
- Rebuilt the **Shamel360** warehouse portal from scratch, leading three developers: a feature-based architecture in a monorepo with a shared UI package, virtualized tables, collapsible column groups, and a Jira-style board.
- Built a shadcn-inspired shared UI library with a CLI used across BitBang projects, and the touch-first Kun admin portal.

Senior Frontend Developer

MAR 2023 – MAR 2024

Walaplus · Remote

- Sole frontend developer: modernized every product's frontend onto a current stack — including rebuilding the legacy Blade PHP client portal as a modern SPA — and worked on almost all of the company's products.

- Built retailer- and partner-facing portals (offers, vouchers, WalaOne operations) and translated Figma design-system foundations into reusable React and Vue components.
- Dockerized frontend projects, defined the stack for new products, and supported hiring with technical interviews.

Frontend Developer

JUN 2020 – MAR 2023

Fatura LLC · Cairo

- Built a React credit-service portal for client self-service and an internal Audit Portal in React and TypeScript.
- Diagnosed and fixed a major performance issue in the Operations Portal's transaction filters, cutting wait times by ~80% for a portal serving thousands of clients.
- Implemented a Vue Collector Portal for payment-collection workflows and extended the Vue-based Operations Portal.
- Delivered backend tasks in Node.js and Express.js: Google social login, API endpoint changes, and database migration scripts.

Frontend Developer (Part-time)

FEB 2022 – NOV 2022

Scandiweb · Remote

- Owned most of the frontend and CMS styling for Magento e-commerce clients — the Møller Auto marketplace (VW & Audi) and the Printerbase storefront.

Frontend Developer

FEB 2020 – JUN 2020

Andalusia Group · Cairo

- Built the Andalusia Care website in Nuxt and Bootstrap, improving patient access to healthcare services and information.

Flutter Developer

SEP 2019 – JAN 2020

Creator X · Cairo

- Launched a Flutter reservation app that surpassed 1,000 downloads and lifted reservations within its first month.

03/ CORE SKILLS

CORE STACK
React.js, Next.js, TypeScript, JavaScript, Vue.js, Nuxt.js

BACKEND
Node.js, NestJS, Express.js, Fastify, C#, .NET (ABP), Entity Framework Core, REST, GraphQL, Socket.IO, BullMQ

DATA
PostgreSQL, Prisma, MongoDB, SQL, Redis

AI IN PRODUCTS
OpenAI, AWS Transcribe, OpenRouter

STATE
TanStack Query, Redux, Zustand, Pinia, Apollo Client

UI & STYLING
Tailwind CSS, SCSS, Framer Motion, shadcn/ui, Storybook, design systems

TESTING & TOOLING
Jest, Vitest, React Testing Library, Playwright, xUnit, Vite, Webpack, Docker, GitHub, Bitbucket, Jira

AI-ASSISTED DEV
Claude, Codex, OpenCode, Cursor, GitHub Copilot, ChatGPT, Windsurf

04/ EDUCATION

Information Technology Institute (ITI) 2019
Diploma in Systems Development · Egypt

Pyramids Higher Institute 2018
B.S. in Communication & Electronics Engineering · Egypt
