SUMMARY

Senior full-stack engineer with a frontend focus and 6+ years of experience building scalable web applications across fintech, e-commerce, and healthcare. Strong in React, Next.js, TypeScript, Vue/Nuxt, Node.js, and API-driven architecture, with practical backend experience across NestJS services, PostgreSQL with Prisma, database migrations, and data workflows. Combines frontend architecture, dashboard-heavy product delivery, and team leadership with hands-on collaboration across the stack.

CORE SKILLS

Languages: JavaScript, TypeScript, SQL
Frontend: React.js, Next.js, Vue.js, Nuxt.js, Redux, Zustand, Pinia, Framer Motion, shadcn/ui
Backend & APIs: Node.js, Express.js, NestJS, REST APIs, GraphQL, Apollo Client
Databases & ORMs: PostgreSQL, MongoDB, Redis, Prisma
Testing & Tooling: Jest, React Testing Library, Storybook, Docker, Vite, Webpack, GitHub, Bitbucket, Jira
Styling & UI Systems: Tailwind CSS, CSS, SCSS, design systems, reusable component libraries
Specialties: Full-stack product development, developer experience, touch-optimized UI, gesture handling, kiosk-style interfaces
AI-assisted Development: Claude, Codex, OpenCode, Cursor, GitHub Copilot, ChatGPT, Windsurf

EXPERIENCE

Senior Frontend Engineer / Frontend Lead | BitBang (Remote) | Mar 2024 - Present

- Led architecture improvements across multiple fintech and platform products, increasing component reuse, development consistency, and maintainability across data-heavy dashboards.
- Revamped the GoPay Biller dashboard to improve performance, workflow clarity, and day-to-day usability across key billing flows.
- Initiated SparkFlow, an internal Jira-style platform built from team bench time, and helped build it full-stack (a NestJS API over PostgreSQL and Prisma, Redis and BullMQ jobs, a React frontend); it replaced BitBang's Jira subscription, and every team project moved onto it.
- Built core areas of Amplifidor, an influencer and brand platform (React, TypeScript, GraphQL): creator profiles, audience insights, and the wallet, plus English/Arabic localization with full RTL support.
- Laid the frontend foundation for the Shamel360 warehouse fulfillment portal (React 19, TanStack Query): routing, layout, and shared table, filter, and form components; built the inventory stock list and the product configuration and approval flows.
- Led and mentored a frontend team of 5 engineers across junior, mid, and senior levels; owned code reviews, engineering standards, and delivery quality.
- Contributed to Kun Admin Portal with tablet-optimized, touch-friendly interfaces for in-gym staff operations, and supported Tasheelat and Face Children initiatives.
- Created a custom UI library and CLI tooling to streamline component setup and improve development consistency.
- Integrated Persona and Moyasar Payments in collaboration with backend services to support secure onboarding and transaction flows.
- Worked closely with backend and product teams on API contracts, integrations, and end-to-end delivery across multiple product domains.

Senior Frontend Developer | Walaplus (Remote) | Mar 2023 - Mar 2024

- Modernized the client portal UI and refactored legacy frontend logic to improve responsiveness, usability, and maintainability.
- Built a retailer portal for offers, vouchers, and data-management workflows, and helped select the frontend stack for new implementations.
- Dockerized frontend applications to simplify deployment workflows and improve environment consistency.
- Collaborated with product and backend teams to deliver scalable features across client-facing and retailer-facing platforms.

Frontend Developer | Fatura LLC, Cairo | Jun 2020 - Mar 2023

- Delivered a React-based credit service portal that improved client self-service and day-to-day usability.
- Built an internal Audit Portal using React and TypeScript to support monitoring, investigation, and analysis workflows.
- Enhanced the Vue-based Operations Portal used by thousands of clients, improving reliability and feature delivery.
- Implemented the Collector Portal in Vue to support payment collection workflows and operational efficiency.
- Contributed backend endpoints, database migrations, and cross-stack workflow support using Node.js and Express.js.

Frontend Developer (Part-time) | Scandiweb (Remote) | Feb 2022 - Nov 2022

- Implemented features for e-commerce clients across multiple domains, including printer and automotive experiences.
- Improved performance and user engagement through targeted frontend optimizations and iterative feature delivery.

Frontend Developer | Andalusia Group, Cairo | Feb 2020 - Jun 2020

- Built the Andalusia Care website using Nuxt and Bootstrap to improve patient access to healthcare services and information.

Flutter Developer | Creator X, Cairo | Sep 2019 - Jan 2020

- Launched a reservation app in Flutter that exceeded 1,000 downloads and increased reservations in its first month.

EDUCATION

Information Technology Institute (ITI), Egypt | Diploma in Systems Development | 2019
Pyramids Higher Institute, Egypt | B.S. in Communication and Electronics Engineering | 2018
