## 01/ SUMMARY

Senior full-stack engineer with a frontend focus and 6+ years building scalable, high-performance web applications across fintech, e-commerce, and healthcare. Owns architecture and design systems, **leads teams of 7+ engineers**, and ships across the stack — **React, Next.js, TypeScript, and Vue/Nuxt** on the front, **Node.js, NestJS, Prisma, and PostgreSQL** behind it — from data-heavy dashboards and realtime systems to touch-first, kiosk-scale interfaces.

## 02/ CORE SKILLS

**CORE STACK**
React.js, Next.js, TypeScript, JavaScript, Vue.js, Nuxt.js

**BACKEND**
Node.js, NestJS, Express.js, Fastify, REST, GraphQL, Socket.IO, BullMQ

**DATA**
PostgreSQL, Prisma, MongoDB, SQL, Redis

**STATE**
TanStack Query, Redux, Zustand, Pinia, Apollo Client

**UI & STYLING**
Tailwind CSS, SCSS, Framer Motion, shadcn/ui, Storybook, design systems

**TESTING**
Jest, Vitest, React Testing Library, Playwright

**TOOLING**
Vite, Webpack, Docker, GitHub, Bitbucket, Jira

**AI-ASSISTED DEV**
Claude, Codex, OpenCode, Cursor, GitHub Copilot, ChatGPT, Windsurf

## 03/ EXPERIENCE

### Senior Frontend Engineer / Frontend Lead

MAR 2024 – PRESENT  CURRENT

BitBang · Remote

#### SparkFlow

INITIATED · FULL-STACK

React 19 · TypeScript · TanStack Query · NestJS · Fastify · Prisma · PostgreSQL · Redis · Socket.IO · BullMQ

- BitBang's internal task and project-management tool: I initiated it from team bench time and helped build it across the stack. It **replaced BitBang's Jira subscription**, and every team project moved onto it.
- Scope: workspaces, teams, boards, backlog, sprints, issues, and history; a rich-text editor with mentions; realtime updates over Socket.IO and Redis; BullMQ workers for issue events and notifications.
- Production hardening: Microsoft Entra SSO plus email/password auth, tenant and project isolation in queries and database constraints, indexed paginated reads, and virtualized boards.

- Led frontend architecture across fintech and platform products — component reuse, consistency, and maintainability on data-heavy dashboards — and worked with backend teams on API contracts.

- Led and mentored a team of 7+ frontend engineers — owning code reviews and engineering standards — and redesigned onboarding, cutting new-engineer ramp-up to 2 weeks.
- Owned the **GoPay** frontend, a SADAD-integrated B2B billing platform — public site and operator dashboard (payments, ZATCA invoicing, reconciliations, approvals) — and revamped its Biller dashboard for performance and workflow clarity.
- Built core areas of **Amplifidor**, an influencer-and-brand platform (React, TypeScript, GraphQL): creator profiles, audience insights, and the wallet, plus English/Arabic localization with full RTL.
- Laid the frontend foundation for the **Shamel360** warehouse fulfillment portal (React 19, TanStack Query) and built its inventory stock list and product configuration and approval flows.
- Built an internal UI kit and project templates with a CLI, and drove performance work on data-heavy products: TanStack Query caching, schema-generated TypeScript types, and virtualized lists and tables.
- Delivered tablet-optimized, touch-friendly interfaces for the Kun admin portal and integrated Persona and Moyasar for secure onboarding and payments, supporting the Tasheelat and Face Children initiatives.

### Senior Frontend Developer

MAR 2023 – MAR 2024

Walaplus · Remote

- Led a full architectural overhaul of the legacy client portal — migrating a server-rendered Blade PHP app to a modern SPA — delivering a multi-fold improvement in navigation speed, maintainability, and UX.
- Built retailer- and partner-facing portals (offers, vouchers, WalaOne operations) and translated Figma design-system foundations into reusable React and Vue components.
- Dockerized frontend projects, helped define stack choices for new products, and interviewed engineering candidates.

### Frontend Developer

JUN 2020 – MAR 2023

Fatura LLC · Cairo

- Built a React credit-service portal for client self-service and an internal Audit Portal in React and TypeScript.
- Diagnosed and fixed a major performance issue in the Operations Portal's transaction filters, cutting wait times by ~80% for a portal serving thousands of clients.
- Implemented a Vue Collector Portal for payment-collection workflows and extended the Vue-based Operations Portal.
- Contributed backend endpoints, database migrations, and cross-stack workflow support in Node.js and Express.js.

### Frontend Developer (Part-time)

FEB 2022 – NOV 2022

Scandiweb · Remote

- Shipped features for e-commerce clients in printer and automotive retail, with targeted performance and engagement work.

### Frontend Developer

FEB 2020 – JUN 2020

Andalusia Group · Cairo

- Built the Andalusia Care website in Nuxt and Bootstrap, improving patient access to healthcare services and information.

### Flutter Developer

SEP 2019 – JAN 2020

Creator X · Cairo

- Launched a Flutter reservation app that surpassed 1,000 downloads and lifted reservations within its first month.

## 04/ EDUCATION

**Information Technology Institute (ITI)** 2019

Diploma in Systems Development · Egypt

**Pyramids Higher Institute** 2018

B.S. in Communication & Electronics Engineering · Egypt
